EDUCATION

University of California, Los Angeles (GPA: 3.88)

Graduated Dec 2025

B.S. Statistics and Data Science, Minor in CS

Los Angeles, CA

Relevant Coursework: Python, Data Science, Databases and SQL, Statistical Models & Data Mining, Machine Learning, Data Structures, Algorithms, Optimization, Experimental Design, Probability, Linear Algebra

Georgia Institute of Technology

Incoming Aug 2025

M.S. Computer Science, AI/ML Track

Remote

EXPERIENCE

Gale Visa

Sep. 2025 – Mar. 2026

Data Engineer Consultant

Los Angeles, CA

- Engineered an automated ETL pipeline in Python with an AI workflow to scrape, clean, and aggregate 2M+ rows of gov data and process future data releases.
- Containerized the pipeline into a Docker image stored in GitHub, connecting the repo to a PostgreSQL database that I modeled for fast querying.
- Designed a dashboard linked to the database backend to visualize trends, providing actionable metrics to steer non-technical higher-ups to focus business on specific US hotspots.

UCLA Dept. of Medicine Statistics

Jan. 2025 – Dec. 2025

Data Analyst/Engineer

Los Angeles, CA

- Designed and validated REDCap database and permissions for research in stroke treatment with confidential EHR.
- Built a cloud-based dashboard in RStudio to integrate genomic data and participant demographics from 21 studies, streamlining Alzheimer's research into a central hub; used GitHub for version control.
- Adapted research team's vague goals into dashboard features, providing insight to drive demographic targets.

Kickback

Apr. 2025 – Jun. 2025

Data Analyst Consultant

Los Angeles, CA

- Queried SQL database of e-commerce analytics to monitor website KPIs, identifying UX pain points.
- Designed and deployed metric-driven A/B tests, bringing conversion rates up from 0.3% to 3% in two months.

PROJECTS

Protein Structure LLM Predictor | PyTorch

Mar. 2025 – May. 2025

- Vectorized amino acid sequences with Hugging Face transformers for ingestion into ML models.
- Tuned random forest and logistic regression parameters to predict protein structure, achieving 78% test accuracy; resolved memory limits by batching embeddings and model training.

DataFest Hackathon 2024 & 2025 | RStudio, Tableau

Apr. 2025

- Assembled pipelines to clean and merge datasets totaling 300,000+ rows of student website interaction data in RStudio; conducted EDA and statistical tests to identify pain points in student performance and engagement.
- Built dashboard of student performance and web KPIs in Tableau, translating bottleneck analysis into actionable insights for non-technical reps.

Spotify Data Analysis | SciKit-Learn, TensorFlow

Sep. 2024 – Dec. 2024

- Monitored and solved NN overfitting with dropout and weight decay, improving test accuracy from 30% to 55%; tuned hyperparameters via grid search to improve to 60.4%.
- Visualized multicollinearity and variable distributions with Matplotlib to enable interpretation of final model parameters and transform variables based on model requirements.

SKILLS

Languages: R/RStudio, Python, SQL, Linux/Unix/Bash, C++, LaTeX, TypeScript

Developer Tools: Docker, Databricks, Tableau, PostgreSQL, Git/GitHub, Excel

Libraries: NumPy, Pandas, PyTorch, TensorFlow, Keras, SciKit-Learn, Matplotlib, Plotly, Selenium, Beautiful Soup

Soft Skills: Unafraid to ask questions, detail-oriented, mettle in fast-paced environment, quick learner

Fun Stuff: Rock climbing, social deduction games, reading
